Engineering solutions to problems I personally encounter. Built LixiLens after struggling with unfamiliar words while reading, turning a daily frustration into an AI-powered reading assistant. Automated font installation after spending hours manually extracting ZIP files as a part-time logo designer. This pattern of noticing friction and building fixes defines how I work. An AI & Data Science student who thinks like a product builder, identifying real-world gaps, rapidly prototyping solutions, and shipping them to production.

SKILLS

Tools: Python (Pandas, NumPy), MySQL, Power BI, Excel, Jupyter Notebook, Anaconda

Techniques: Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization, Statistical Analysis

Programming & Libraries: Python, Matplotlib, Seaborn, MySQL, Data Transformation

Soft Skills: Analytical Thinking, Problem Solving, Business Communication, Fast Learner, Attention to Detail

EDUCATION

Galgotias College of Engineering and Technology

2022 – 2026

B.Tech in Artificial Intelligence & Data Science

Aklank Public School

Senior Secondary

Percentage: 88%

St. Francis Academy

Matriculation

Percentage: 90%

EXPERIENCE

Data Science Intern | daOrion Consulting Pvt Ltd

Apr – Sep, 2025

- Performed data preprocessing and exploratory data analysis on real-world healthcare datasets, improving data quality and reliability for downstream predictive modelling.
- Contributed to a disease prediction model by applying machine learning techniques, gaining practical experience in cross-functional data pipelines and enterprise-grade data workflow.
- Demonstrated ownership of assigned tasks and collaborated with stakeholders to validate analytical outputs, building the communication and data accuracy practices central to master data initiatives.

PROJECTS

Shadow Detection & Removal from image | *Python, PyTorch, DL*

- Developed a shadow detection and removal pipeline using **CTU-Net+** (CNN-Transformer) for accurate shadow localization and illumination correction.
- Trained and evaluated the model on the **ISTD** dataset using PyTorch, achieving a **BER** of 2.351 and **RMSE** of 0.0797.

LixiLens, AI Vision-Based Reading Assistant | *GenAI, API, NLP*

- Engineered an **AI-powered** web platform leveraging **OCR** and **Large Language Models** (LLMs) to extract text from book images and provide **contextual vocabulary explanations**.
- Improved reading efficiency by eliminating manual dictionary lookups through real-time AI-assisted **word detection**, **contextual understanding**, and **multilingual support**.

AI-Powered Social Media Automation Workflow | *n8n, APIs, Automation*

- Designed a process that triggers from Google Sheets, summarizes articles with OpenAI, formats content, and auto-publishes it to LinkedIn and X.
- Implemented features like **AI-based summarization**, multi-platform posting, and extensible workflow design, gaining hands-on experience in **automation** and **API** integrations.

Font Installer Automation Script | *Python, Automation*

- A Python automation script that installs fonts from **ZIP** files on Windows, including **admin privilege** checks, font extraction (**zipfile/shutil**), system registration (**win32com**), and font cache refresh.
- Learned **Windows system internals**, **permission handling** and practical **automation scripting**.
